

ABDULLAH HOSPITAL

Bahawalnagar, Punjab Pakistan

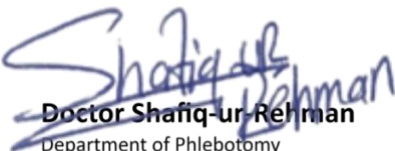

Confirmation of INFRAVEIN Project Testing Phase

11-10-2021

It is officially confirmed that our hospital is currently testing the INFRAVEIN project, a near-infrared (NIR) vein finder device, under Dr. Saqib Saleem's supervision. This ground-breaking gadget, developed by Mirza Riyasat Ali and Muhammad Sameer Shahid, has the potential to revolutionize vein visualization during medical procedures.

The INFRAVEIN project aims to improve patient safety and medical effectiveness by addressing difficulties encountered during vein detection, particularly in overweight patients. With its potential for use in clinics, hospitals, and homecare environments, INFRAVEIN has enormous potential to enhance venipuncture procedures.

We understand that INFRAVEIN has the potential to improve patient care standards and medical technology, we are fully committed to supporting its testing and further development.
